

# Screenshots:

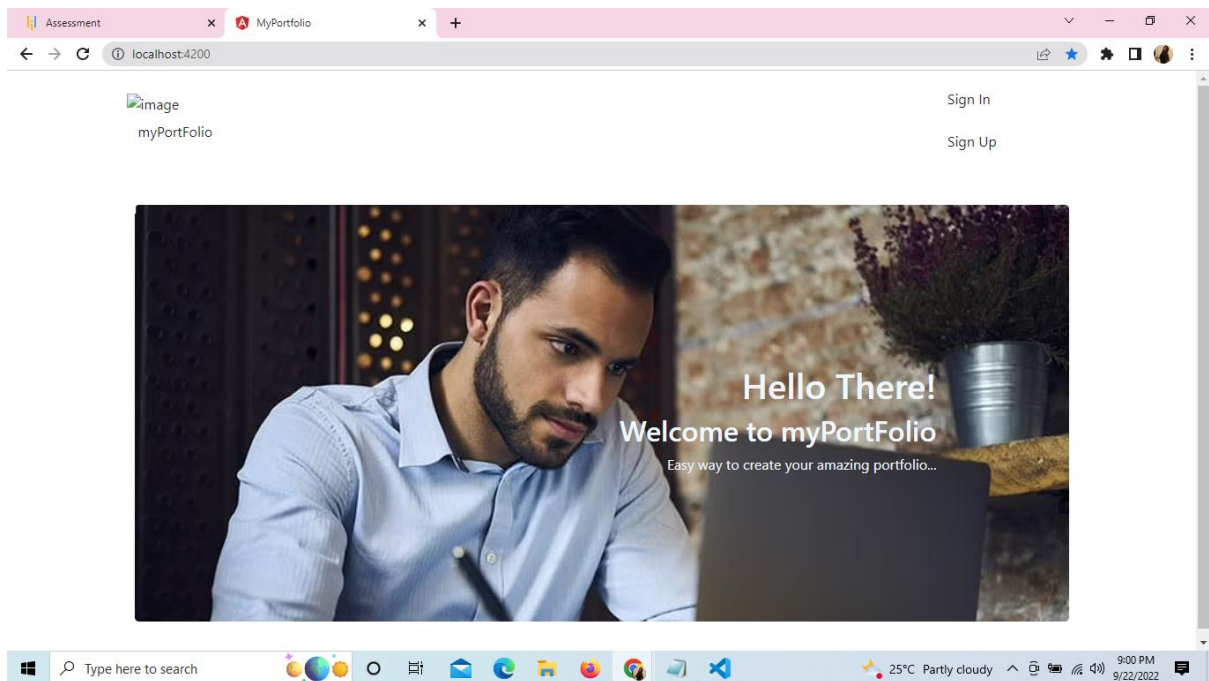

The screenshot shows the Visual Studio Code editor with the file `polyfills.ts` open. The file contains comments and code for importing polyfills. The terminal at the bottom shows the output of the build process, including the date, hash, time, and a list of chunks with their sizes and status.

```
22 // import 'classlist.js'; // Run 'npm install --save classlist.js'.
23
24 /**
25  * Web Animations '@angular/platform-browser/animations'
26  * Only required if AnimationBuilder is used within the application and using IE/Edge or Safari.
27  * Standard animation support in Angular DOES NOT require any polyfills (as of Angular 6.0).
28  */
29 // import 'web-animations-js'; // Run 'npm install --save web-animations-js'.
30
31 /**
32  * By default, zone.js will patch all possible macroTask and DomEvents
33  * user can disable parts of macroTask/DomEvents patch by setting following flags
34  * because those flags need to be set before 'zone.js' being loaded, and webpack
35  * will put import in the top of bundle, so user need to create a separate file
36  * in this directory (for example: zone-flags.ts), and put the following flags
37  * into that file, and then add the following code before importing zone.js.
38  * import './zone-flags.ts';
39  *
40  * The flags allowed in zone-flags.ts are listed here.
41  */
```
